

SAILUN

RADIAL TRUCK TIRES CATALOGUE 2015

Sailun Tyres have built up an enviable reputation throughout the world as the manufacturer and provider of high- quality, great value premium economy tyres. Covering a number of applications, Sailun manufactures research-led tyre patterns for every type of day-to-day use.

Sailun was established in 2002 in the National Economic and Technological Development Zone in Qingdao, China. Now, Sailun sells over 30 million tyres annually in over 50 countries worldwide. From the outset, the Sailun tyre company has combined technical expertise with innovative research and development to design and manufacture world-class tyres for all types of vehicles.

It selects only world-class partners and recognised leaders in their specific technological and rubber industry specialisation. Sailun's growth is attributable to its commitment to three core values – Quality product, service you can Trust and lifetime Support. Sailun is With You Through Every Turn.

Sailun Worldwide

Sailun has two factories with a combined capacity of over 500,000 sqm. Via a corporate warehousing facility, Sailun distributes its tyres globally through a precisely-appointed professional network of tyre distributors.

Sailun works closely with every single distributor to ensure that the local Sailun opportunity is maximised in the most relevant and appropriate fashion – Think Global, Act Local. Building on the strong foundations of real-world testing, Sailun will continue to develop the most advanced and cost-efficient platform for tyre manufacturing and distribution - while utilising its information technology and substantial research resources to help establish new tyre patterns.

Research and Development

Sailun has made great progress in the tyre industry despite its short history. Sailun currently invests over 30% of its resources in research and development. In 2009, Sailun, together with the Qingdao University of Science and Technology, were nominated to develop a National Tyre Process and Control Engineering Technology Research Centre to develop and build the optimal platform to promote and enhance tyre technology.

The Centre studies and resolves key technical issues in the tyre manufacturing process. The vision of the Centre is to move the tyre industry forward through the quest for improved technology and the production of higher quality products. Sailun is the first tyre manufacturer to integrate production, research, and product demonstration into the development of new products. The Centre now employs over 300 technical specialists.

Sailun's computerised tyre production and manufacturing processes - in conjunction with management techniques and network control systems - allows it to effectively monitor quality control, resource management, marketing, administration and logistics. In addition, Sailun uses advance information technology to help track the data of each tyre produced, and to benchmark the Sailun tyre quality against other leading international standards of quality and design. Sailun collaborates closely with academic institutions to develop and improve formulation techniques, tyre structure, tyre testing methods, and information technology.

Sailun is accredited internationally and certified to meet the most stringent quality standards and the highest levels of quality assurance. Sailun is proud to have received the Parent Tested Parent Approved (PTPA) Seal of Approval for its Sailun Atrezzo and Ice Blazer tyre line ups. PTPA is North America's largest volunteer parent testing community, with over 50,000 parents. The PTPA Winner's Seal is evidence of a product's excellence from having been evaluated by unbiased parent testers.

Mission Statement

To serve the global village, through the provision of the finest quality products that build value for all our stakeholders; our team, our partners and our customers – all the while driven by continuous improvement, respect for the environment, and the establishment of trust in everything we do.

The S605 is Sailun's premium long-haul steer tire, featuring a decoupling groove and five wide ribs for a stable ride at all speeds. Stone ejectors minimize tire damage, while extra-wide grooves and S-sipes effectively disperse water for excellent hydroplaning resistance.

Features & Benefits:

- SmartWay® Verified - approved for use on EPA SmartWay® certified equipment.
- S-sipes improve traction in wet conditions and dissipate heat for prolonged tread life.
- Unique tread wall bite edges reduce irregular wear and improve traction.
- Stone ejectors protect tire from stone drilling.
- Decoupling groove helps to minimize irregular wear.

SMARTWAY VERIFIED TIRE:
APPROVED FOR USE ON EPA SMARTWAY CERTIFIED EQUIPMENT

The S606 is Sailun's premium steer tire, featuring extra wide shoulders with built in sipes for excellent stability and traction under all weather conditions. An extra deep 22/32" tread depth ensures the S606 delivers exceptional mileage, while an interlocking symmetrical tread block design promotes even wear and a square footprint.

Features & Benefits:

- Multi-sipes improve traction in wet conditions and dissipate heat for prolonged tread life.
- Unique tread wall grooves help reduce irregular wear and improve traction.
- Stone ejectors protect tire from stone drilling.
- Extra deep tread pattern (22/32") with special compound for extended tread life.
- Wide footprint and square shoulder design for improved stability and mileage.

SMARTWAY VERIFIED TIRE:
APPROVED FOR USE ON EPA SMARTWAY CERTIFIED EQUIPMENT

	161/157 G	20	15.5	9.00	1076	312	19.7	4625	4125	900

The S607 is a premium all-position regional steer tire, designed with extra wide shoulders that resist curbing damage and stone ejector buttons to reduce stone retention. Full-length sipes built into tread blocks effectively channel water for exceptional wet traction. The S607 is a versatile tire, suitable on all regional applications such as delivery trucks, buses, and concrete trucks.

Features & Benefits:

- 5-rib design and wide shoulders for improved stability.
- Tread profile designed to reduce rolling resistance and improve fuel economy for improved stability and mileage.
- Interlocking multi-sipes improve traction in wet conditions and increase stability.

S626 STEER

Size	L.I. / S.R.	P.R.	T.D.	RIM	O.D.	S.W.	S.L.R.	L.C.C.		
								Single	Dual	A.P.
								kg	kg	kPa
11R22.5	148/145 L	16	14.0	8.25	1054	279	19.3	3250	2900	850

10.00R20	146/142 K	16	14.0	7.50	1054	278	19.1	3000	2630	840

The S626 is designed with tread rubber, with low heat generating qualities, with excellent burst and abrasion resistance. Using the design of four longitudinal grooves with good drainage, even distribution of ground contact pressure, prevention of irregular wear and tear, and superior manoeuvrability and comfort.

Features & Benefits:

- Small cutter grooves give the tyre good heat radiation with a strong grip performance and ability of anti-slippery.
- Rubber projections at the bottom of the groove can effectively discharge clamped pebbles.
- Four main longitudinal zigzag grooves bring good directional stability to the tyre and reduce its irregular tear and wear and keep it in good drainage.

S628 STEER

295/80R22.5	152/148 M	16	15.0	9.00	1044	298	19.2	3550	3150	850

The S628 is a special tubeless tire, suitable for use on highways, normal roads, moderate/long distance transport as well as trucks and buses. Four longitudinal tread patterns provide the tire with good handling stability and ride comfort. The optimal design of balanced outer contour brings good heat radiation with superior high speed performance to the tire. Advanced formulations for tread wear rubber provide the tyre with excellent wear resistance.

Features & Benefits:

- Fine horizontal cutter grooves provide the tire with good heat radiation, strong grip performance and ability of anti-slippery.
- The optimized tread arc design produces low rolling resistance and enhances fuel-saving performance.
- Four central longitudinal grooves provide the tire with good handling stability and ride comfort.
- The shoulder cutter grooves and its steel plate are well designed to provide good heat radiation and to prevent irregular wear on its shoulder.

	157/154 L	20	16.5	9.00	1076	312	19.7	4125	3750	900

The S629 is suitable for the guide wheels of moderate/long distance trucks and buses running on good roads. Its proprietary compound tread formula provides excellent abrasion resistance. The unique shoulder design and the deeper shoulder fine grooves prevent the tyre from abnormal wear. Widened running surface offers a better grounding performance.

Features & Benefits:

- Horizontal and longitudinal shallow grooves provide the tire with strong grip performance and ability of anti-slippery.
- Its widened running surface improves its ground contact pressure and provides the tyre with better grounding performance.
- The longitudinal zigzag tread grooves at the bottom of four central grooves provide the tyre with good maneuverability and ride comfort.
- The widened shoulder and unique design for the shallow grooves on its shoulder provide its shoulder with good heat radiation and to prevent its irregular wear.

S636 STEER

Size	L.I. / S.R.	P.R.	T.D.	RIM	O.D.	S.W.	S.L.R.	L.C.C.		
								Single	Dual	A.P.
			mm	inch	mm	mm	inch	kg	kg	kPa
10.00R20	149/146 L	18	16.5	7.50	1054	278	19.1	3250	3000	930
11.00R20	152/149 L	18	16.5	8.00	1085	293	19.7	3550	3250	930

The S636's balanced inner contour is well designed to greatly improve the durability of its belt. The tread base rubber with low heat generation reduces the defects of its shoulder. The wear resistance of its tread rubber is improved to increase its mileage. It has a good grounding imprint and receives uniform force exertion to prevent partial wear.

Features & Benefits:

- Fine cutter grooves provide the tire with good heat radiation, stronger grip performance and ability of anti-slippery.
- Special modification for its shoulder can effectively prevent partial wear.
- Four central longitudinal grooves provide excellent maneuverability with the best groove shape and good prevention of sideslip.
- The widened running surface and the deeper groove pattern design effectively enhance the abrasion resistance of treads and increase the mileage of the tyre.

The S637 is a versatile regional all-position tire, featuring five extra-wide ribs for exceptional stability at all speeds. An extra-wide solid shoulder resists damage caused by high-scrub applications, while a mirrored tread design ensures even wear. Wide grooves designed for hydroplaning resistance, while a long-life rubber compound is engineered for extended tread life.

Features & Benefits:

- Multi-sipes improve traction in wet conditions and dissipate heat for prolong tread life.
- Shallow tread designed to reduced rolling resistance for improved fuel economy.
- Unique tread wall grooves/sipes to help reduce irregular wear.

The S637+ is a versatile regional all-position tire, featuring five extra-wide ribs for exceptional stability at all speeds. An extra-wide solid shoulder resists damage caused by high-scrub applications, while a mirrored tread design ensures even wear. Wide grooves designed for hydroplaning resistance, while a long-life rubber compound is engineered for extended tread life.

Features & Benefits:

- Multi-sipes improve traction in wet conditions and dissipate heat for prolong tread life.
- Shallow tread designed to reduced rolling resistance for improved fuel economy.
- Unique tread wall grooves/sipes to help reduce irregular wear.

The S665 is the tubeless truck and bus tires, designed for highway and normal roads. Four vertical patterns adopted for excellent handling stability and ride comfort. External contour design reduces heat generation and ensures high speed performance. The new tread formula is created for outstanding abrasion resistance.

Features & Benefits:

- Horizontal grooves and special tiny grooves on tire treads improve drainage performance and wet skid resistance.
- Four longitudinal grooves offer excellent handling stability and ride comfort.
- Longitudinal and circuitous grooves in the middle of the tire crown prevent clamping stones and keep good self-cleaning.

The S696 is designed with the tread rubber with low heat generation. The low section tyre is used to replace the double tyres. High-intensity crown and carcass design improves tire resistance to bursting and ensures driving safely.

Features & Benefits:

- Small grooves provide the tyre with good heat radiation, a strong grip performance and ability of anti-slippery.
- Shut-off shoulder design enhances its tread's wear-resistance performance and effectively prevents the partial wear of its shoulder.
- The inclined surface of zigzag grooves can effectively discharge clamped pebbles.
- Super wide running surface, specially processed shoulder plus a specially designed tread formula make its wear resistance more remarkable.

The S622 is a premium free-rolling position trailer tire. With a decoupling groove that resists irregular sidewall wear, and wide ribs to prevent damage caused by high-scrub applications. The S622 is also a low-rolling resistance tire designed to maximize your mileage.

Features & Benefits:

- V-sipes improve traction in wet conditions and dissipate heat for prolonged tread life.
- Main groove stone ejectors protect tire against stone drilling.
- 5 full depth grooves for excellent traction in wet and dry conditions.
- Decoupling grooves help minimizing irregular wear.

The S701 tire is suitable for drive-position and applicable for long-distance road. The specialised rubber tread compound provides excellent abrasion performance. The variable pitch tread design and narrow horizontal grooves effectively reduces tire noise.

Features & Benefits:

- Three longitudinal grooves offer excellent handling stability and ride comfort.
- Open shoulder design and horizontal pattern improve driving and braking performance.
- Widen road surface reduces the load pressure and provide excellent driving stability.
- Narrow and horizontal grooves reduce tire noise.

The S702's high wear resistance and low heat generation tread rubber formula ensures the service life of tyres. Its good grip performance provides excellent driving capability. The reinforcement rib between pattern blocks is designed to enhance the connection between the pattern blocks and to avoid partial wear and to prevent the pattern blocks from coming off.

Features & Benefits:

- The steel plates of the pattern blocks are capable of the segmentation of block patterns and reduction of locally.
- Horizontal and wider grooves greatly improve self-cleaning properties of the tyre and provide the tyre with excellent driving performance.
- The connection ribs between pattern blocks are designed to reduce the movement of the pattern blocks and decrease the partial wear of the tyre.
- Widened running surface is designed to ensure safety in controlling the tyres.

Suitable for highway and normal roads, long-distance transportation, and in the drive axle position.
 High wear resistance, low heat buildup tread formula to ensure the useful life of the tire.
 Great grip performance that provides excellent drive capability.
 Strong tread and carcass designs reducing chances of a popped tire, therefore increase driving safety.

Features & Benefits:

- Groove ends are notched which can improve the driving performance of the tire.
- 4 zigzag grooves and three straight grooves twists are designed to provide exceeding handling performance and driving performance while preventing stones from being lodged.
- A widened shoulder and shoulder groove design allows for better head dissipation on the shoulder to prevent irregular wear.
- Widened the running surface and improved the abrasion resistance and running stability of the tire.

The S711's robust carcass provides maximum load-bearing capacity. Its special tread design effectively improves its self-cleaning properties. Its deepened groove provides the tyre with a super long mileage and balanced wear.

Features & Benefits:

- Its narrow grooves on both sides of a groove reduce the tread rigidity and at the same time prevent its partial wear.
- The deepened horizontal zigzag grooves extending from the shoulder to the central part provides excellent driving and braking performance. Its shoulder pattern blocks connected by reinforcement ribs are designed.
- to prevent tearing of grooves and to improve its anti-partial wear performance. The connection ribs between pattern blocks are designed to reduce the movement of the pattern blocks and decrease the partial wear of the tyre.
- Its zigzag steel plate design will reduce the pattern blocks' hardness and increase its grip performance for wet roads.

The S737 is a regional pick-up and delivery drive tire, with 6-interlocking tread blocks and a symmetrical design designed to promote even wear throughout the tire's life. Tapered lateral grooves make the S737 a performer in all-weather applications.

Features & Benefits:

- Integrated tie bars reduce irregular wear and promote increased stability.
- Angled lug and siping design improves overall traction and wet grip.
- M&S rated, all-weather lug tread designed for regional use.
- Lug-to-void ratio optimized for self-cleaning and excellent traction.

Lateral winding sipes makes the tire less likely to skid in wet conditions and improves grip performance in ice and snow. By optimizing the outer contour of the tire, as it makes contact with the ground the pressure is uniformly dispersed effectively preventing irregular wear. The tire has a better contact area thanks to the widened running surface.

Features & Benefits:

- The lateral winding sipes gives the tire great performance in snow and ice as well as less chance of skidding.
- Transverse grooves are designed to effectively improve the driving performance of the tire.
- The ribs placed in the lateral grooves on the shoulder help hold the pattern in place to prevent partial wear during use.
- Widening of the running surface provides a clear footprint.

The S753 is a premium open-shoulder drive tire, which is excellent for regional and pickup applications. Featuring an interlocking tread block design for stone and debris ejection, the S753 delivers exceptional tread life at 26/32" tread depth.

Features & Benefits:

- Central and edge siping for improved traction.
- Open shoulder design and tread grooves promote self-cleaning characteristics and improve traction.
- Integrated central lugs for improved stability.
- Extra strong casing design for enhanced durability.

The S758 is designed for severe off-road applications. With an extra-deep 32/32" tread depth and a rubber compound engineered to resist the most demanding environments, the S758 is ideal for construction, logging, and off-road environments. Stone ejectors resist the damages caused by stone retention, and an open shoulder with tapered sidewalls aids lateral stability.

Features & Benefits:

- Open grooves to maximize self-cleaning.
- Stone ejectors protect tire from stone drilling.
- Extra deep tread (32/32") and M&S lug pattern designed specifically for on- and off-road applications.

SMARTWAY VERIFIED TIRE:
APPROVED FOR USE ON EPA SMARTWAY CERTIFIED EQUIPMENT

The S767's high wear-resistant and heat dispersive tread design ensures longer tread life and stronger grip performance to provide superior driving ability and solid tire structure that provides reliability and top performance.

Features & Benefits:

- Horizontal wide grooves improve self cleaning.
- Double S shaped tread blocks provide excellent grip and traction.
- Widened surface for safe handling.
- Connected shoulder ribs reduces wear.

The S768 EFT is a premium closed shoulder drive tire, designed with a wide shoulder featuring tapered lateral edges for enhanced lateral stability. The S768 also features stone ejector buttons that reduce stone retention, and an extra-deep 26/32" tread depth for enhanced tread life.

Features & Benefits:

- SmartWay® Verified-approved for use on EPA SmartWay® certified equipment.
- Stone ejectors protect tire from stone drilling.
- Extra deep tread pattern (26/32") with special compound for extended tread life.
- Wide footprint and square shoulder design for improved stability and mileage.
- Multi-sipes improve traction in wet conditions and dissipate heat for prolonged tread life.

The S811's unequal pitch of tread patterns is designed to reduce the rolling noise of the tyre. The bead reinforcement technique provides excellent load resistant power. Its closed shoulder is used both to guarantee its good stability and reduce the abnormal wear of its shoulder.

Features & Benefits:

- The large and deep grooves on the shoulder is designed to increase the driving performance of the treads.
- The design of the unique angle for major grooves and the design for groove bottoms provide a strong grip and driving force. Three main longitudinal grooves provide good directional stability and reduce irregular wear and are adapted to various roads.
- The pattern design for the widened running surface and the puncture resistance formula are characterized by excellent resistance to puncture and to abrasion.

The S812's unequal pitch of tread patterns is designed to reduce the rolling noise of the tyre. The bead reinforcement technique provides excellent load resistant power. Its closed shoulder is used both to guarantee its good stability and reduce the abnormal wear of its shoulder.

Features & Benefits:

- The reduction of the burrow volume on the shoulder enhances the performance of the tire support and improves wear resistance.
- The design of the unique angle for major grooves and the design for groove bottoms provide a strong grip and driving force.
- The pattern design for the widened running surface and the puncture resistance formula are characterized by excellent resistance to puncture and to abrasion.

The S815 is a mixed service tread tire, featuring a chip-resistant compound ideally suited for off-road and construction applications. A zigzag tread pattern design reduces stone retention, while maximizing traction under all applications. Sidewall protectors are engineered to provide an enhanced level of protection to the casing.

Features & Benefits:

- Large deep shoulder grooves for improved traction and heat dissipation.
- Interlocking lugs promote improved stability and smoother wear.
- Wide footprint and unique shoulder design for improved stability.
- Specially formulated compound and deep tread depth for improved tread life.

The S816's unequal pitch of tread patterns is designed to reduce the rolling noise of the tyre. The reinforced carcass and reinforced tire bead make the service life of a tyre longer. Its closed shoulder is used both to guarantee its good stability and reduce the abnormal wear of its shoulder.

Features & Benefits:

- Small cutter grooves provide the tyre with a strong grip performance and ability of anti-slippery.
- Super wide running surface, specially processed shoulder plus a specially designed tread compound make its wear resistance more remarkable.
- The inclined surface of zigzag grooves and the rubber projection at the bottom of the groove can effectively discharge clamped pebbles.

S825 ALL POSITION

445/65R22.5	168 K	20	17.0	13.00	1150	444	20.7	5600	—	830

The S825 is an all-position mixed service tire, engineered with a rubber compound that resists high-scrub and off-road applications. Stone ejector buttons reduce tire damage, and angled tread blocks are designed to deliver excellent wet traction.

Features & Benefits:

- Interlocking lugs promote improved stability and smoother wear.
- Stone ejectors protect tire from stone drilling.
- Wide footprint and unique shoulder design for improved stability.
- Specially formulated compound for improved tread life.

S827 ALL POSITION

	160/157 K	20	16.5	8.50	1226	315	19.9	4500	4125	900

The S827 is good for highway, common road, long-distance transport, as well as all wheel axles. The super durable tire bead structure is used to provide the tyre with superior load carrying capacity. Three longitudinal grooves and horizontal shallow sipes provide the tyres with both good manoeuvrability and driveability. Its closed shoulder is used both to guarantee its good stability and reduce the abnormal wear of its shoulder.

Features & Benefits:

- Fine cutter sipes on the pattern blocks and fine horizontal cutter sipe on the edge and horizontal shallow sipes provide the tyre with excellent wet-skid resistance.
- Three longitudinal grooves and horizontal shallow sipes enhance the tire's maneuverability and driveability.
- The rubber projections at the bottom of the central zigzag grooves can effectively discharge clamped pebbles, and the bottom has good self-cleaning capacity.
- The optimized tread arc design produces low rolling resistance and fuel-saving performance.

8.25R16LT	128/124 K	16	14.0	6.50	855	235	15.6	1800	1600	770

The S828 is good for highway, common road, long-distance transport, as well as all wheel axles. Three longitudinal grooves and horizontal shallow sipes provide the tyres with both good maneuverability and drivability. High-intensity crown and carcass design improves tire resistance to bursting and ensure driving safely.

Features & Benefits:

- The tiny cutter grooves near the edge of grooves can enhance the heat radiation of pattern treads and reduce the irregular wear and tear of the tyre.
- The winding design for the central zigzag sipes and the bottom of two gutters can effectively provide the tyre with excellent maneuverability and at the same time prevent stone trapping.
- Tiny streamlined horizontal cutter grooves on the treads can provide good drainage properties and excellent wet-skid resistance capability.
- The optimized tread arc design produces low rolling resistance and enhances fuel-saving performance.

Four longitudinal groove with transversal groove design improve handling and wet traction.

Tread pattern pitch design reduces ride noise.

Wider running surface to provide better drive and manipulative performance. Outer profile design helps to minimize irregular wear

Features & Benefits:

- Tiny transversal groove with zigzag-sipes improve wet grip and traction in wet conditions.
- Four longitudinal groove with transversal groove design improve handling and wet traction.
- Outer profile design helps to minimize irregular wear.
- Wider running surface design with special compound provides superior performance of anti-puncture and anti-abrasion.

The S909's unique tread design and compound provides long mileage, whilst preventing irregular wear. An open-shouldered design minimises heat generation. The S909 is manufactured with a unit patterned groove to improve the tires self-cleaning qualities.

Features & Benefits:

- Thin narrow grooves enhances driving safety on wet skid road.
- Unique pattern grooves improves tire self-cleaning.
- Horizontal large pattern blocks and unique pattern grooves provide excellent driving and breaking performance.
- The center tread pattern increases tire gripping ability.

	156/153 F	20	19.5	8.50	1136	315	20.3	4000	3650	900

The S911's special bead design improves the durability of the tyre. Special tread design effectively improves the tyre's self-cleaning properties. Stout patterns provide powerful traction.

Features & Benefits:

- The tiny cutter grooves near the edge of grooves can enhance the heat radiation of pattern treads and reduce the irregular wear and tear of the tyre.
- Deepened grooves will increase mileage.
- The overall pattern design, similar to the arrangement of an animal's spinal bones, is used both to strengthen the rigidity of the patterns in the central region of the crown and to provide a better balance for two shoulders of the tyre and more uniform tread wear as well as more stable running of the tyre.
- The pattern depth in this area forms a transition between the treads and the bottom of the main grooves and makes the transition of force-bearing between grooves and pattern blocks more reasonable and increases the grip of the tyre.

The Sailun S917 drive tire has been engineered to perform in demanding conditions such as mining, construction and logging applications. The S917 features an aggressive multi-lug tread design for exceptional off-road traction and an enhanced rubber compound to resist cuts and chunking. Open shoulder ribs deliver superior stability and resistance to uneven wear. The S917's deep 31/32" tread depth provides long tread life and an exceptional cost per mile.

Features & Benefits:

- Aggressive multi-lug design.
- Deep tread depth created for excellent tread life.

The S918's special tyre for short-moderate distance transport on a non-paved road. A special bead structure is used to improve the durability of the tire. Special tread rubber is used for puncture resistance and tear resistance. Stout patterns provide strong traction performance.

Features & Benefits:

- Large horizontal pattern blocks coordinate with deepened grooves to provide the tyre with excellent driving and braking performance.
- Open shoulders and deepened horizontal wide grooves are designed to provide excellent self-cleaning ability and strong driving force/braking force on non-paved roads.
- The connection ribs between pattern blocks are designed to increase the rigidity of the pattern blocks and to restrain the grooves from tearing.

The S929's special bead structure is designed to improve the durability of the tyre. The directional pattern design improves the wear resistance of the shoulder surface. The special tread design effectively improves the self-cleaning properties of the tyre. Stout patterns provide powerful traction.

Features & Benefits:

- Coherence, stout horizontal block pattern gives the tyre excellent driving and braking performance.
- Deepened grooves increase mileage.
- The reinforcement ribs of the grooves make the transition of force-bearing between grooves and pattern blocks more reasonable and increase the grip of the tyre and effectively prevent the blocks from tearing.

S951

CONSTRUCTION

Size	L.I. / S.R.	P.R.	T.D.	RIM	O.D.	S.W.	S.L.R.	L.C.C.		
								Single	Dual	A.P.
			mm	inch	mm	mm	inch	kg	kg	kPa
315/80R22.5	156/150K	18	23	9.00	1076	312	19.7	4000	3350	850

Large block and deep tread design, puncture resistance, block 'drop off' protection, and excellent driving and braking performance. Tread groove design effectively prevents rocks from being lodged in the tread to protect the carcass and improve tire life. This tire is especially useful on poorly built roads due to the special tread compounds that ensure excellent laceration resistance.

Features & Benefits:

- The bottom of the groove is reinforced with smaller rubber nodes to prevent stones from being lodged, effectively protecting the carcass.
- Anti-puncture; scratch resistant tread design.
- Tread compounds ensure excellent laceration resistance; specially created for bad roads.
- Dynamic material design allocation allows for safer driving; helps prevent accidents.

SW01 WINTER

Size	L.I. / S.R.	P.R.	T.D.	RIM	O.D.	S.W.	S.L.R.	L.C.C.		
								Single	Dual	A.P.
								kg	kg	kPa
11R22.5	144/142L	14	22	8.25	1065	279	19.3	2800	2650	720
	146/143L	16	22	8.25	1065	279	19.3	3000	2725	830
	148/145L	16	22	8.25	1065	279	19.3	3150	2900	850

Specifically designed for winter driving conditions patterns, provide excellent driving / braking force in ice and snow. Wide running surface and deeper tread design provides longer mileage SW01. 3D zigzag sipes slit design, increased tread contact area with the ground, giving greater block rigidity, improve tire grip, while the tires can also provide an excellent late drive / braking force.

Features & Benefits:

- Unique wave-siping design increases tire contact area with the ground. The tire pattern rigidity is increased giving it great driving and braking capacity.
- The open lateral groove design provides strong driving and braking power and reduces skidding to ensure driving safety.
- Created with a cold resistant tread compound (the strong physical and mechanical properties have a high retention rate in cold weather) and fit with lateral grooves designed for greater driving capability in snowy conditions.
- Dynamic material design allocation allows for safer driving; helps prevent accidents.

SW02 WINTER

Size	L.I. / S.R.	P.R.	T.D.	RIM	O.D.	S.W.	S.L.R.	L.C.C.		
								Single	Dual	A.P.
								kg	kg	kPa
295/80R22.5	150/147M	16	21	9.00	1044	298	19.2	3350	3075	830
	152/148L	16	21	9.00	1044	298	19.2	3550	3150	850
	152/149L	18	21	9.00	1044	298	19.2	3550	3250	900

Created with a cold resistant tread compound (the strong physical and mechanical properties have a high retention rate in cold weather) and fit with lateral grooves designed for greater driving capability in snowy conditions. Employs a non-slip formula specially made for snowy conditions and multi-block groove design in the tread to safely and effectively discharge snow. 3D zigzag cut steel design increases the tread contact area with the ground. This provides greater block rigidity along with improved performance and grip in snow and ice to prevent skidding.

Features & Benefits:

- The unique wave-shaped steel sheet design increases the tire contact area with the ground. The improved rigidity of the pattern allows for greater drive and braking capacity.
- The open lateral groove design provides strong driving and braking power and reduces skidding to ensure driving safety.
- Created with a cold resistant tread compound (the strong physical and mechanical properties have a high retention rate in cold weather) and fit with lateral grooves designed for greater driving capability in snowy conditions.
- Dynamic material design allocation allows for safer driving helps prevent accidents.

SW03 WINTER

Size	L.I. / S.R.	P.R.	T.D. mm	RIM inch	O.D. mm	S.W. mm	S.L.R. inch	L.C.C.		
								Single kg	Dual kg	A.P. kPa
295/80R22.5	150/147M	16	21	9.00	1044	298	19.2	3350	3075	830
	152/148L	16	21	9.00	1044	298	19.2	3550	3150	850
	152/149L	18	21	9.00	1044	298	19.2	3550	3250	900

Multi-block pattern and multi-longitudinal main groove design adds effective anti-skid safety by employing a non-slip formula specifically made for snowy conditions.
 Cold resistant tread compound and dense fine lines added to the groove design provide strong driving power on snow covered roads.
 3D zigzag cut steel design increases the tread contact area with the ground. This provides greater block rigidity along with improved performance and grip in snow and ice to prevent skidding.

Features & Benefits:

- Unique 3D steel design provides greater heat dissipation for strong grip capability and performance.
- The greater amount of longitudinal grooves and small lateral tread groove design ensures traffic safety by lowering the chance of skidding on icy and snowy roads.
- Cold resistant tread compound, fine lines, and dense surface groove design ensure that the tire mechanical properties effectively prevent skidding and the falling off of tread blocks at low temperatures.
- Dynamic material design allocation allows for safer driving; helps prevent accidents.

EFT SAILUN EFT PROGRAM

ENVIRONMENTALLY FRIENDLY TECHNOLOGY

SmartWay® Verified Technologies Low Rolling Resistance Tires. The EPA has determined that certain tire models can reduce NOx emissions and fuel use by 3 percent or more, relative to the best selling new tires for line haul trucks, when used on all five axles on long haul Class 8 trucks[1].

Sailun is proud to introduce the S605 EFT and S768 EFT SmartWay® Verified Low Rolling Resistance tires. At Sailun, the EFT program is our ongoing commitment to the environment and to our customers aiming to deliver more for your investment while minimizing environmental impacts.

EPA SMARTWAY® VERIFIED TECHNOLOGIES

SmartWay® Verified Technologies, developed by the United States Environmental Protection Agency, is a public / private collaboration between the USEPA and the freight transportation industry that helps freight shippers, carriers, and logistics companies improve fuel-efficiency and save money.
